Using insights gleaned from the latest LTSS State Scorecard, produced by the AARP Public Policy Institute with support from The SCAN Foundation, The Commonwealth Fund and AARP Foundation, this discussion will highlight some of these critical issues and offer insights for how state and local leaders may address them and in doing so improve the lives of older adults, adults with disabilities, and their family caregivers.

Serious mental illness is the 2nd leading cause of disability in the United States. 1 in 6 adults will experience major depressive disorder and approximately 1 in 5 mothers experience symptoms of postpartum depression each year. Serious mental illness imposes a heavy burden on individuals, families and our healthcare system; this burden has a disproportionate impact on women, communities of color and veterans. Our discussion will highlight challenges patients face as they navigate access to care and underscore the need for innovation in treatment and care for serious mental illness. This session will address policy solutions elected leaders can take to ensure equitable access to mental health treatment for all.
